

never a false note here

[never a false note here](#)

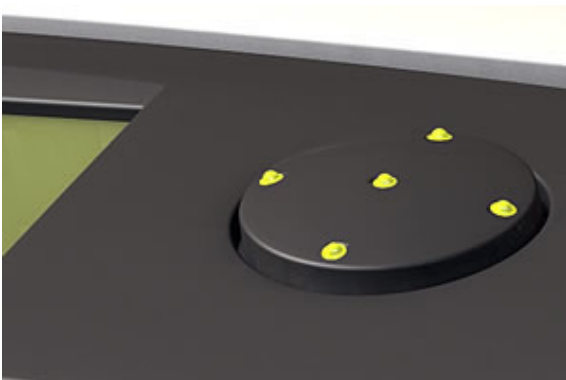

Getting payed in counterfeit money is every merchants nightmare. Not only do you lose money but you become a crime suspect as well.

The [SuperVision mc](#) money tester can detect false bank notes in 3 different currencies.

The notes which are hand fed, not only detect for possible forgeries but count the bills as well. This double process saves time for intended users, whether they are banks, retailers or money exchange booths.

client: [BellCon](#), 2006

One simple 5-way button together with the LCD display guides the user during operation of the device. The note feeding mechanism was constructed to not only work silently but to accommodate even very worn and soiled notes.

The whole development process was outsourced to 3 separate companies. L2DESIGN had responsibility for all product design and graphics, [Kirkholm maskiningeniører](#) took care of all engineering and part construction and [Homatic](#) was responsible for all the electronic bits and pieces.
